

Test and production engineer

LunaMicro is developing a world-leading technology to transport water through textiles and textile-like materials. Our patented technology has the potential to revolutionize what you think fabric can do in fields such as clothing, medicine, and electronics. We're looking for another engineer to help us streamline our production process and improve our products. If you're a self-driven, detail-oriented, social person interested in working for a high-tech startup with plans to revolutionize a traditional industry, we may have an exciting opportunity for you.

Responsibilities: We are expanding our team and are searching for an engineer to develop and coordinate our production processes and products, evaluate potential product and process improvements, and to communicate with customers.

Desired background and skills: Given that we are currently focused on integrating our products in the textile and clothing industries, training and/or experience in the garment or textile industries is desired (but not absolutely necessary). Other skills of merit include data analysis, experimental / laboratory work, writing process specifications, customer relations, and programming and software skills. Strong interpersonal and social skills, flexibility, and the ability to handle several tasks, switching quickly between them, are also desired. Since our first market will likely involve performance outdoor clothing, an appreciation for nature would also be seen as beneficial.

Other requirements: Strong written and verbal communication skills in both English and Swedish, permission to work in Sweden, driver's license.

Location: Linköping, Sweden, with potential travel to Stockholm and Borås

Salary: To be determined based on experience and training

Starting: In agreement between company and candidate. Fall 2019

Application procedure: To apply for the position, send a cover letter and CV to recruitment@lunamicro.se. Questions regarding the position can be directed to the same email address. Applications will be evaluated continually as they are received.

LunaMicro's core values

At LunaMicro, we are:

LunaMicro AB, Teknikringen 7, 583 30 Linköping, Sweden

- Honest – Honesty creates confidence. Honesty includes transparency, i.e. we are not hiding anything and we show respect for others. Among other things, honesty and transparency make it easy for us to trust one another, and for others to trust us.
- Inclusive – We value diversity both in the social sense (race, ethnicity, religion, sexual orientation, etc.) and in terms of background, education, and experience. Similarly, we expect our employees and external partners (customers, etc.) to express their opinions, particularly dissenting opinions. The incorporation of feedback, including dissent, improves our design and decision-making processes.
- Accountable – Everybody working for the company shall take responsibility for the performance of work and its follow-up. Sustainability and quality are building blocks on which our products, and reputation, are built.
